CABBAGE DISEASES.

Susceptibility to Rot and Infection Due to Soil Conditions.

In a bulletin on "Cabbage Experiments and Culture" issued by the Maryland agricultural experiment station it is asserted that the susceptibility to rot and disease of cabbage growing on very rich, highly cultivated land seemed to be due more to something unsultable in the soil rather than to the direct attacks of bacteria or fungi. During very rainy weather in the bent of summer young and apparently vigorous cabbage plants will ing to think up a beast suitable to wear the word "progressive" across its back.

When the animal is found the new party can be successfully launched, and not before.

The elephant is getting old and gouty and usly town. The successfully launched and gouty and seeming of the Manney town is getting old and gouty and seeming of the Manney town.

Wilt and die If the weather is more crately dry and the soil loose and well cultivated, cabbage will grow vigor. Mrs. L. H. Rumrill.

The third and fourth degrees were conferred upon several candidates. Saturday night by the Raubcher in land of the soil loose and well cultivated, cabbage will grow vigor outly and seemingly resist disease even if the soil is known to be infect.

The elephant is getting old and gouty and successfully launched, and not before.

PATCH OF CULTIVATED CARRAGE.

August. In the bright sunshine which followed the plants wilted and died. The crop was a failure except a portion of the lower corner, which was on a poor ciay knob, and there a few

good heads matured. Due consideration was given to the fact of poor drainage and also to excessive amounts of water about the roots, to which might be attributed

prepared for the crop.
